-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE <u>3</u> MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

1)☒ Responsive to communication(s) filed on <u>appeal brief filed 8/31/05</u>.

2a)☐ This action is **FINAL**. 2b)☒ This action is non-final.

3)☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

4)☒ Claim(s) <u>1-12</u> is/are pending in the application.

    4a) Of the above claim(s) _____ is/are withdrawn from consideration.

5)☐ Claim(s) _____ is/are allowed.

6)☒ Claim(s) <u>1-12</u> is/are rejected.

7)☐ Claim(s) _____ is/are objected to.

8)☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

9)☐ The specification is objected to by the Examiner.

10)☐ The drawing(s) filed on _____ is/are: a)☐ accepted or b)☐ objected to by the Examiner.

    Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).

    Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).

11)☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

12)☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).

    a)☒ All b)☐ Some * c)☐ None of:

      1.☒ Certified copies of the priority documents have been received.

      2.☐ Certified copies of the priority documents have been received in Application No. _____.

      3.☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

    * See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

1)☒ Notice of References Cited (PTO-892)

2)☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)

3)☐ Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08)
    Paper No(s)/Mail Date _____.

4)☐ Interview Summary (PTO-413)
    Paper No(s)/Mail Date. _____.

5)☐ Notice of Informal Patent Application (PTO-152)

6)☐ Other: _____.

DETAILED ACTION

Response to Arguments

1.   Applicant's arguments, see appeal brief, filed 8/31/05, with respect to the

rejection(s) of claim(s) 1, 6, 11 and 12 under Yonemitsu have been fully considered and

are persuasive. Therefore, the rejection has been withdrawn. However, upon further

consideration, a new ground(s) of rejection is made in view of Yonemitsu and Sazzad et

al (6,122,321).

Claim Rejections - 35 USC § 103

2.   The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all

obviousness rejections set forth in this Office action:

> (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

3.   Claims 1-12 are rejected under 35 U.S.C. 103(a) as being unpatentable over

Yonemitsu (5,485,279) in view of Sazzad (6,122,321).

Regarding claims 1 and 6, Yonemitsu discloses a method and video encoder for

encoding images in a first resolution mode with reference to a reference image having

said first resolution (fig.20 is a video encoder that encodes images in MPEG standard

including I, P and B images with a first resolution, where I and P frames are reference

images), the encoder comprising a memory having the capacity for storing said

reference image with said first resolution (fig.20, element 63 is a memory for storing

reference image in first resolution mode); and control means for selectably encoding

said images in a second, lower resolution mode with reference to two reference images

having said second resolution (fig.20, element 54 controls the image prediction

encoding mode), and for storing said two reference images with the second resolution

in said memory (fig.20, element 121 is a memory for storing reference images in

second resolution mode).

Yonemitsu does not specifically disclose the memory for storing reference

images in both first and second resolutions. However, Sazzad teaches the (col.13,

ln.46-67, col.14, ln.13-22, col.16, ln.5-10, Sazzad discloses the storage of images of

multiple resolutions (ie. SDTV, HDTV), as seen in fig.4, where element 430 is a

memory unit that can store reference images I and P pictures as well as B pictures of

different resolutions). Therefore, it would have been obvious to one of ordinary skill in

the art to combine the teachings of Yonemitsu and Sazzad, as a whole, for reducing

costs of producing video decoders, ie. MPEG and ATSC compatible decoders, and as

well in other applications pertinent to other television receivers, video recorders,

computers, other devices so as to decode high quality images in an efficient manner

for display (Sazzad col.4, ln.15-17 and col.5, ln.12-19).

Regarding claims 2 and 7, Yonemitsu discloses further including a motion

estimation circuit applying a predetermined search strategy in the first resolution mode

to search motion vectors representing motion between an input image and the

reference image, said motion estimation circuit being arranged to apply said search

strategy in the second resolution mode to both reference images (fig.20, element 64 is

the motion estimation/compensation circuit that applies a search strategy in the first

resolution mode and also note there is an arrow that directs the motion estimation

circuit to apply the search strategy in the second resolution mode to elements 123 and

then to element 122).

Regarding claims 3 and 8, Yonemitsu discloses wherein selected images are

encoded in the second resolution mode with respect to one of said reference images,

the motion estimation circuit being arranged to apply the search strategy in a first pass

to search motion vectors with a first precision (fig.20, element 64 is the motion

estimation/compensation circuit that applies a search strategy in the first resolution

mode and also note there is an arrow that directs the motion estimation circuit to apply

the search strategy in the second resolution mode to elements 123 and then to

element 122 for searching motion vectors with a first precision), and to apply said

search strategy in a second pass to refine the precision of the motion vectors found in

the first pass (fig.20, note output of element 122 goes back to the DCT 164 for a

second pass to refine the precision of the motion vectors found in the first pass).

Regarding claims 4 and 9, Yonemitsu discloses further arranged to selectably

encode images in a third, yet lower resolution mode with reference to two reference

images having said third resolution, said motion estimation circuit being arranged to

apply said search strategy in the third resolution mode to both reference images, and

to apply the search strategy for each reference image in a first pass to search motion

vectors with a first precision (fig.20, element 202 is the motion

estimation/compensation circuit that applies the search strategy in the third resolution

mode to the reference images and also note there is an arrow that directs the motion

estimation circuit to apply the search strategy in the third resolution mode to elements

204 and then to element 202 for searching motion vectors with a first precision), and to

apply said search strategy in a second pass to refine the precision of the motion

vectors found in the first pass (fig.20, note output of element 202 goes back to the DCT

203 for a second pass to refine the precision of the motion vectors found in the first

pass).

Regarding claims 5 and 10, Yonemitsu discloses wherein said reference image

having the first resolution is a previous image of a sequence of images (fig.20, note the

reference image of a sequence of images stored in element 63 is in the first resolution),

one of the reference images having the second resolution is a previous image of said

sequence, and the other one of the reference images having the second resolution is a

subsequent image of said sequence (fig.20, note the reference images of a sequence

of images stored in element 124 is in the second resolution).

Regarding claims 11 and 12, Yonemitsu discloses a method and video decoder

for decoding images in a first resolution mode with reference to a reference image

having said first resolution (fig.21 performs the decoding operation of fig.20; also, fig.21

is a video decoder that decodes images in MPEG standard including I, P and B images

with a first resolution, where I and P frames are reference images), the decoder

comprising a memory having the capacity for storing said reference image with said first

resolution (fig.21, element 75 is a memory for storing reference image in first resolution

mode), characterized in that the video decoder comprises control means for decoding

said images in a second, lower resolution mode with reference to two reference images

having said second resolution (fig.21, note the IVLC 141 decodes prediction mode,

motion vector, and quantization scale information, coded from control means of fig.20, for decoding the reference images in the second, lower resolution mode), and for storing said two reference images with the second resolution in said memory (fig.21, element 85 stores reference images in the second resolution).

Yonemitsu does not specifically disclose the memory for storing reference images in both first and second resolutions. However, Sazzad teaches the (col.13, ln.46-67, col.14, ln.13-22, col.16, ln.5-10, Sazzad discloses the storage of images of multiple resolutions (ie. SDTV, HDTV), as seen in fig.4, where element 430 is a memory unit that can store reference images I and P pictures as well as B pictures of different resolutions). Therefore, it would have been obvious to one of ordinary skill in the art to combine the teachings of Yonemitsu and Sazzad, as a whole, for reducing costs of producing video decoders, ie. MPEG and ATSC compatible decoders, and as well in other applications pertinent to other television receivers, video recorders, computers, other devices so as to decode high quality images in an efficient manner for display (Sazzad col.4, ln.15-17 and col.5, ln.12-19).

Contact Information

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Allen Wong whose telephone number is (571) 272-7341. The examiner can normally be reached on Mondays to Thursdays from 8am-6pm Flextime.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Mehrdad Dastouri can be reached on (571) 272-7418. The fax phone

number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
